Foreword: Predicting the responses of animals to their ...

from the animal's body The authors assert that the inter-play between these two sources of nutrients is genetically driven, and thus animal responses cannot be predicted on the basis of food properties alone The paper thus calls for a better description of the reproducing animal, in terms of what it is trying to achieve both in the short

A RESOURCE ALLOCATION MODEL DESCRIBING ...

allocation of resources (R), to a production trait (P) and fitness of an animal Resources are defined as energy input, which depend on both nutrition and environment (temperature, oxygen level) Resource allocation is controlled by an allocation factor 'c' so that resources for fitness (R_f) and for production (R_p) are : $R_f = cR$ $R_p = (1-c)R$
