A Framework for Measuring Health Inequality

We define health inequality to be variations in health status across individuals in a population (16) This approach, which is consistent with the measurement of inequality in other fields, such as economics, allows us to perform cross-country comparisons and study the determinants of health inequality (24)

ON THE MEASUREMENT OF INEQUALITIES IN HEALTH*

measurement of inequalities in health The secondary purpose of the paper is to illustrate the usefulness of measures of inequality in comparative studies of health inequality In Sections 3 and 4 we examine how measures of inequality can help in assessing trends in and cross-country differences in inequalities
