The Battle for Yellowstone Mar 26 2022
Yellowstone holds a special place in America's heart. As the world's first national park, it is globally recognized as the crown jewel of modern environmental preservation. But the park and its surrounding regions have recently become a lightning rod for environmental conflict, plagued by intense and intractable political struggles among the federal government, National Park Service, environmentalists, industry, local residents, and elected officials. The Battle for Yellowstone asks why it is that, with the flood of expert scientific, economic, and legal efforts to resolve disagreements over Yellowstone, there is no improvement? Why do even seemingly minor issues erupt into impassioned disputes? What can Yellowstone teach us about the worsening environmental conflicts worldwide? Justin Farrell argues that the battle for Yellowstone has deep moral, cultural, and spiritual roots that until now have been obscured by the supposedly rational and technical nature of the conflict. Tracing in unprecedented detail the moral causes and consequences of large-scale social change in the American West, he describes how a "new-west" social order has emerged that has devalued traditional American beliefs about manifest destiny and rugged individualism, and how morality and spirituality have influenced the most polarizing and techno-centric conflicts in Yellowstone's history. This groundbreaking book shows how the unprecedented conflict over Yellowstone is not all about science, law, or economic interests, but more surprisingly, is about cultural upheaval and the construction of new moral and spiritual boundaries in the American West.

Effective Conservation Science Mar 14 2021
This edited volume assembles some of the most intriguing voices in modern conservation biology. Collectively they highlight many of the most challenging questions being asked in conservation science today, each of which will benefit from new experiments, new data, and new analyses. The book's principal aim is to inspire readers to tackle these uncomfortable issues head-on. A second goal is to be reflective and consider how the field has reacted to challenges, and to what extent these challenges advance conservation science. A concluding chapter will synthesize common themes that emerge from the experiences of the authors in these debates and discuss how best to guard against confirmation bias. The hope is that this book will lead to greater conservation of ecosystems and biodiversity by harnessing the engine of constructive scientific scepticism in service of better results.--

The Best American Magazine Writing 2017

Nov 29 2019 With the work of reporters under fire worldwide, this year's anthology of National Magazine Award finalists and winners is a timely reminder of the power of journalism. The pieces included here explore the fault lines in American society. Shane Bauer's visceral "My Four Months as a Private Prison Guard" (Mother Jones) and Sarah Stillman's depiction of the havoc wreaked on young people's lives when they are put on sex-offender registries (The New Yorker) examine controversial criminal-justice practices. And responses to the shocks of the

recent election include Matt Taibbi's irreverent dispatches from the campaign trail (Rolling Stone), George Saunders's transfixing account of Trump's rallies (The New Yorker), and Andrew Sullivan's fears for the future of democracy (New York). In other considerations of the political scene, Jeffrey Goldberg talks through Obama's foreign-policy legacy with the former president (The Atlantic), and Gabriel Sherman analyzes how Roger Ailes's fall sheds light on conservative media (New York). Linking personal stories to the course of history, Nikole Hannah-Jones looks for a school for her daughter in a rapidly changing, racially divided Brooklyn (New York Times Magazine), and Pamela Colloff explores how the 1966 University of Texas Tower mass shooting changed the course of one survivor's life (Texas Monthly). A selection of Rebecca Solnit's Harper's commentary ranges from a writer on death row to the isolation at the heart of conservatism. Becca Rothfeld ponders women waiting on love from the Odyssey to Tinder (Hedgehog Review). Siddhartha Mukherjee depicts the art and agony of oncology (New York Times Magazine). David Quammen ventures to Yellowstone to consider the future of wild places (National Geographic), and Mac McClelland follows a deranged expedition to Cuba in search of the ivory-billed woodpecker (Audubon). The collection concludes with Zandria Robinson's eloquent portrait of her father as reflected in the music he loved (Oxford American).

Shadow Mountain Dec 11 2020 After forming an intense bond with Natasha, a wolf cub she raised as part of her undergraduate research, Renée Askins was inspired to found the Wolf Fund. As head of this grassroots organization, she made it her goal to restore wolves to Yellowstone National Park, where they had been eradicated by man over seventy years before. In this intimate account, Askins recounts her courageous fifteen-year campaign, wrangling along the way with Western ranchers and their political allies in Washington, enduring death threats, and surviving the anguish of illegal wolf slayings to ensure that her dream of restoring Yellowstone's ecological balance would one day be realized. Told in powerful, first-person narrative, *Shadow Mountain* is the awe-inspiring story of her mission and her impassioned

meditation on our connection to the wild.

Death in Yellowstone Nov 02 2022 The chilling tome that launched an entire genre of books about the often gruesome but always tragic ways people have died in our national parks, this updated edition of the classic includes calamities in Yellowstone from the past sixteen years, including the infamous grizzly bear attacks in the summer of 2011 as well as a fatal hot springs accident in 2000. In these accounts, written with sensitivity as cautionary tales about what to do and what not to do in one of our wildest national parks, Whittlesey recounts deaths ranging from tragedy to folly—from being caught in a freak avalanche to the goring of a photographer who just got a little too close to a bison. Armchair travelers and park visitors alike will be fascinated by this important book detailing the dangers awaiting in our first national park.

Yellowstone Wolves May 28 2022 In 2020, it will have been twenty-five years since one of the greatest wildlife conservation and restoration achievements of the twentieth century took place: the reintroduction of wolves to the world's first national park, Yellowstone. Eradicated after the park was established, then absent for seventy years, these iconic carnivores returned to Yellowstone in 1995 when the US government reversed its century-old policy of extermination and—despite some political and cultural

opposition—began the reintroduction of forty-one wild wolves from Canada and northwest Montana. In the intervening decades, scientists have studied their myriad behaviors, from predation to mating to wolf pup play, building a one-of-a-kind field study that has both allowed us to witness how the arrival of top predators can change an entire ecosystem and provided a critical window into impacts on prey, pack composition, and much else. Here, for the first time in a single book, is the incredible story of the wolves' return to Yellowstone National Park as told by the very people responsible for their reintroduction, study, and management. Anchored in what we have learned from Yellowstone, highlighting the unique blend of research techniques that have given us this knowledge, and addressing the major issues that wolves still face today, this book is as wide-ranging and awe-inspiring as the Yellowstone restoration effort itself. We learn about individual wolves, population dynamics, wolf-prey relationships, genetics, disease, management and policy, newly studied behaviors and interactions with other species, and the rippling ecosystem effects wolves have had on Yellowstone's wild and rare landscape. Perhaps most importantly of all, the book also offers solutions to ongoing controversies and debates. Featuring a foreword by Jane Goodall, beautiful images, a companion online documentary by celebrated filmmaker Bob Landis, and contributions from more than seventy wolf and wildlife conservation luminaries from Yellowstone and around the world, *Yellowstone Wolves* is a gripping, accessible celebration of the extraordinary Yellowstone Wolf Project—and of the park through which these majestic and important creatures once again roam.

The Wolf Aug 31 2022 The intimate, involving story of the rise and reign of O-Six, the fabled Yellowstone wolf, and the people who loved or feared her. For readers of *H is for Hawk*, captivating works of reportage, and iconic books on the American West. Before humans ruled the Earth, there were wolves. Once abundant in the United States, these majestic creatures were hunted to near extinction by the 1920s. But in recent decades, conservationists have brought wolves from Canada back to Yellowstone

National Park, igniting a battle over the very soul of the American West. With novelistic detail, Nate Blakeslee tells the gripping story of one of these wolves, a charismatic alpha female named O-Six. She's a kind and merciful leader, a fiercely intelligent fighter, and a doting mother. Beloved by wolf watchers, particularly Yellowstone park ranger Rick McIntyre, O-Six becomes something of a social media star, with followers around the world. But as she raises her pups and protects her pack, O-Six is being challenged on all fronts: by hunters and their professional guides, who compete with wolves for the elk they all prize; by cattle ranchers who are losing livestock and have the ear of politicians; and by other Yellowstone wolves who resent her dominance of the stunningly beautiful Lamar Valley. These forces collide in *The Wolf*, a riveting multigenerational wildlife saga that tells a larger story about the clash of values in the West--between those fighting for a vanishing way of life and those committed to restoring one of the country's most vibrant landscapes.

The Value of Species Jun 16 2021 Drawing on insights from philosophy, ethics, law and biology, a naturalist and philosopher advocates on behalf of biodiversity, addressing urgent questions about the destruction of species, and provides a new framework for appreciating and defending every form of life.

Yellowstone Aug 26 2019 Yellowstone National Park is the focal point of the 22-million-acre, multifaceted Greater Yellowstone Ecosystem, located in northwestern Wyoming and in parts of eastern Idaho and Montana. Yellowstone has a uniquely American identity as a place where nature--largely untouched and unmanaged--is allowed to flourish. This is a detailed survey that blends Yellowstone's past into its present and explores its likely future. It covers the first inhabitants of the area; the explorers and visionary conservationists who first brought Yellowstone to public attention; the unsung early heroes of the park's ranger service; and the flora, fauna, and spectacular geology of the region. The book also covers the possible future paths for the park in light of global climate change.

Wolf Nation Nov 21 2021 In the tradition of Peter Matthiessen's *Wildlife in America* or Aldo Leopold, Brenda Peterson tells the 300-year history of wild wolves in America. It is also our own history, seen through our relationship with wolves. The earliest Americans revered them. Settlers zealously exterminated them. Now, scientists, writers, and ordinary citizens are fighting to bring them back to the wild. Peterson, an eloquent voice in the battle for twenty years, makes the powerful case that without wolves, not only will our whole ecology unravel, but we'll lose much of our national soul.
